Project Overview

This project presents a comprehensive sales analytics dashboard for a chocolate manufacturing company. The dashboard visualizes key sales metrics across multiple dimensions—time, geography, and sales personnel—to support data-driven decision-making.

Tools Used

- Database from (Kaggle)
- Data visualization tool (Microsoft Power BI)
- Data aggregation and cleaning (Microsoft Excel, Python Programming Language)

Key Features & Insights

1. Monthly Sales Trend

- Tracks Sum of Amount from January to August.
- Sales peak in January (900K) and gradually decline toward August (740K).
- Highlights seasonality and potential end-of-year slowdown.

2. Sales by Country

- Compares sales performance across Australia, UK, India, USA, Canada, and New Zealand
- Australia leads with (1.14M), followed closely by the UK (1.05M).
- Useful for regional strategy and market prioritization.

3. Sales by Sales Person

- Ranks individual performance, from Chess Bonneil (321K) down to Wilone (139K).
- Enables identification of top performers and those needing support or training.

Business Value

- Provides clear visibility into monthly revenue patterns
- Supports geographic expansion decisions
- Facilitates sales team performance reviews and incentive planning
